

## **STREET/ALLEY REPLACEMENT REQUIREMENTS**

The street/alleys in the City of Edgewater are public thorough fares and need to be regarded as such. The following procedures need to be followed when repairs are called for in the City streets and alleys:

- Proper traffic control devices (street closed, warning signs, etc.) need to be in place.
- Squeegee will be used as pipe bedding.
- All connections must be inspected before covering.
- All excavations (in the street/alley) must be filled to within 7 inches of the alley surface with flow fill.
- All alleys will be replaced with asphalt on the remaining 7 inches of the dig site.
- Proper asphalt compaction is required.
- Asphalt shall be installed to match existing grades.
- Existing drainage patterns shall not be modified by repairs in the alley.
- All excess construction material will be removed from the public right of ways.
- The alley must be left in good condition suitable for traffic within ten (10) days (weather permitting).

**I have read and understand the agreement the City of Edgewater is requiring when working in the alley way.**
